

FIGURE E — defense Pareto. Filled black edge = ASR reduction significant ($p < 0.05$).

'concept only' is INVISIBLE because it lands exactly under 'concept AND refusal' — the refusal half of the AND contributes nothing (it fires on 87-100% of inputs).
On TEST no arm reduces ASR: the DS baseline is already at a floor. On TRAIN the gates' over-refusal saving is matched by the Bernoulli and shuffled controls.

train (n=85; DS baseline ASR = 0.282)

test (n=42; DS baseline ASR = 0.143)

unconditional restoration
gate: refusal only

gate: concept only
gate: concept AND refusal

control: Bernoulli, matched fire-rate
control: shuffled features
